

Everywhere education: Learning when you want, where you want

In today's education landscape, your students, faculty, and researchers expect anywhere, anytime, any-device access to resources. Meanwhile, your IT teams are contending with diverse platforms, complex apps, and strict compliance requirements. Sticking with a legacy, fragmented approach to app delivery and management creates inefficiency, raises costs, and weakens security.

However, by switching to **Omnissa Horizon®** your educational institution can take a centralized, secure, and service-oriented approach. This can help you modernize campus operations, optimize budgets, elevate the academic experience, and prepare your institution for the future of education. Let's take a closer look at what Omnissa brings to the table.

Multi-tenant virtual desktops

Horizon enables you to allocate specific desktop pools for faculty, students, and labs. Use role-based provisioning to automate onboarding and give departments tailored resources, from GPU-powered engineering desktops to secure administrative environments.

Centralized app management

Omnissa App Volumes, included with Horizon, allows your IT teams to package an app once and deliver it on demand in real time to virtual or physical desktops. This helps you reduce operational overhead, prevent image sprawl, and support license compliance.

Unified endpoint management

Integrate **Omnissa Workspace ONE® UEM** with Horizon to manage the full device lifecycle across BYOD, university-owned, and classroom devices. Give IT teams the ability to automate patching, enforce compliance, and gain visibility from a single console.

Secure, anywhere access

The **Horizon Blast Extreme** delivery protocol delivers high-performance desktops over any network. Strong security is enforced through **Omnissa Unified Access Gateway** and policy-based controls with contextual authentication based on user, device, or location. End-to-end controls help enforce privacy mandates and reduce risk.

Automation and smart scaling

Instant clones and real-time provisioning assist with spinning up resources as they're needed, helping to reduce idle capacity and energy costs.

Analytics and cost recovery

Dashboards track usage, resources, and performance to enable charge-backs or show-backs to departments, promoting fairness and budget accountability. Built-in optimization helps consolidate licenses and automate resource reclamation to reduce waste and save money.

Enable everywhere learning with Horizon

To support today's evolving campus, your institution needs to deliver flexible and secure IT services that don't break the bank. Horizon makes this possible by enabling your IT teams to operate like an internal managed service, providing on-demand virtual desktops, apps, and device management for students and staff anywhere.

Benefits at a glance

Efficiency

Simplify management and accelerate provisioning to help reduce your IT workload.

A better experience

Provide fast, reliable access to the tools and apps needed for learning and research.

Scalability

Easily adapt to shifts in demand, whether in person, hybrid, or remote.
