

# Mission consolidation: Deploying smarter tech to win the budget battle

Tightening budgets. Rising cybersecurity mandates. A growing need for flexible and secure access. Today's federal agencies face no shortage of challenges.

Leadership wants operational cost reduction without sacrificing readiness or security while continuing to use legacy tools. At the same time, onboarding new devices requires multiple touchpoints between IT, security, and end users, while overlapping products for device management, app deployment, patching, and monitoring create high licensing overhead.

Relying on disconnected systems creates inefficiency, drives up costs, and makes it harder to maintain compliance requirements like NIST frameworks. However, by consolidating management tools with Omnissa, your agency can reduce endpoint management costs through license consolidation and move from outdated legacy devices to a virtual, mobile environment within a secure, flexible ecosystem. This can help lower your overall TCO while increasing agility for your federal agency.

## At a glance

Replace fragmented tools with a single, secure platform to help your federal agency reduce operational overhead and focus on mission-critical objectives.

omnissa™

## Winning without compromise

Omnissa solutions promote better visibility into app performance, faster troubleshooting, and the continuous optimization of the digital workspace environment. This means your teams can spend less time navigating multiple systems or dealing with IT interruptions and more time focused on mission objectives. Here's a look at what Omnissa can deliver for your agency.

- **Unified endpoint management across all devices** – Manage and secure diverse device fleets from a single, centralized platform to reduce complexity and streamline IT operations.
- **Integrated security and compliance** – Support zero-trust frameworks and compliance with federal regulations like FISMA, FedRAMP, and NIST to avoid costly security breaches and compliance fines while you modernize your agency.
- **Automation and scalability** – Automate device onboarding, patching, app delivery, and security policies to reduce manual IT labor, accelerate deployment times, lower operational costs, and scale resources efficiently.
- **Data-driven insights for cost optimization** – Leverage advanced analytics to gain actionable visibility into device usage, license allocation, and software performance. This allows your agency to reclaim unused assets, optimize resource allocation, and make informed budget decisions that drive down total cost of ownership.

## Modernize securely

Omnissa can help your agency achieve **zero-trust** goals and maintain compliance by supporting secure access from various devices and fortifying security with proactive threat detection. Features like device tunneling, continuous risk verification, and single sign-on (SSO) with multi-factor authentication (MFA) help balance security with user privacy, promoting seamless access to apps and data while protecting sensitive information on both government-issued and personal devices.

### Ready to get started?

Don't just support the mission—accelerate it. **Schedule your strategic briefing** today to see how our **federal government solutions** can empower your agency to deliver with speed and security.
