# Gain visibility and security to better support state and local government

## Manage more, risk less

Today's state and local government agencies are under pressure to modernize fleet management and field operations to better support emergency responders. Your IT admins need to efficiently manage laptops, tablets, and ruggedized mobile devices used by personnel in patrol cars, field vehicles, and at remote emergency locations. Device and app compliance, patching, and security must be verified in real time. But how? That's where Omnissa comes in.

With Omnissa, your IT teams can manage and monitor all your devices and apps efficiently and securely. Need to roll out new apps? **Omnissa App Volumes** allows your personnel to securely access tools and resources from any device—whether in the office or on the street—without manual installation or complex configurations. Continuous monitoring of app performance and device health enables IT to rapidly identify and resolve user and security issues.

By enabling your IT teams to actively manage and monitor devices, Omnissa can help you secure government assets, reduce vulnerabilities, and empower emergency responders to focus on community service and swift response.

## At a glance

Modernize emergency responder device management with real-time compliance, secure remote access, and automated issue resolution.

**omnissa™**

# Stay ahead, stay secure, and be unstoppable

Omnissa provides state and local government agencies with real-time telemetry and analytics, aggregating data from all managed devices to deliver insights into device health, app performance, user location, and network conditions. This enables IT to proactively identify and resolve issues before they impact field operations. With automated alerts and machine-learning-driven risk analysis, Omnissa helps enhance security and ensure emergency responders have seamless access to critical apps and data on any device to stay operational with minimal disruption.

## Benefits for your government agency

- **Cost optimization** – Support measurable ROI and resource savings by automating IT tasks to reduce manual effort, extending hardware lifecycles with virtual desktops, and improving productivity through seamless device and app access while optimizing infrastructure use with hybrid cloud flexibility.

- **Efficient resource management** – Simplify field personnel access through highly secure, zero-touch virtual desktop and app delivery that minimizes IT management overhead and keeps users connected and productive. Optimize resource allocation dynamically for more scalability and agility.

- **Secure mobility** – Strengthen your security posture with proactive threat detection and remediation rooted in zero-trust principles. This includes rapid app deployment and removal, automated patching, and swift remote wipe of lost or stolen devices to maintain integrity and protect your agency's assets.

### Omnissa products recommended for government

**Omnissa Horizon®**
Minimize your hardware footprint and reduce your TCO with fast, secure delivery of virtual desktops and apps.

**Omnissa Workspace ONE® UEM**
Efficiently deploy, manage, and secure mobile devices and desktops across your government agency.

**Workspace ONE® Mobile Threat Defense™**
Fortify security with proactive mobile threat detection and remediation.

**Omnissa Intelligence**
Drive real-time insights and remediation.

**Workspace ONE® Experience Management**
Measure, analyze, and remediate issues across digital experiences on any mobile or desktop device, app, or virtual desktop.
